

Low-fi Prototype

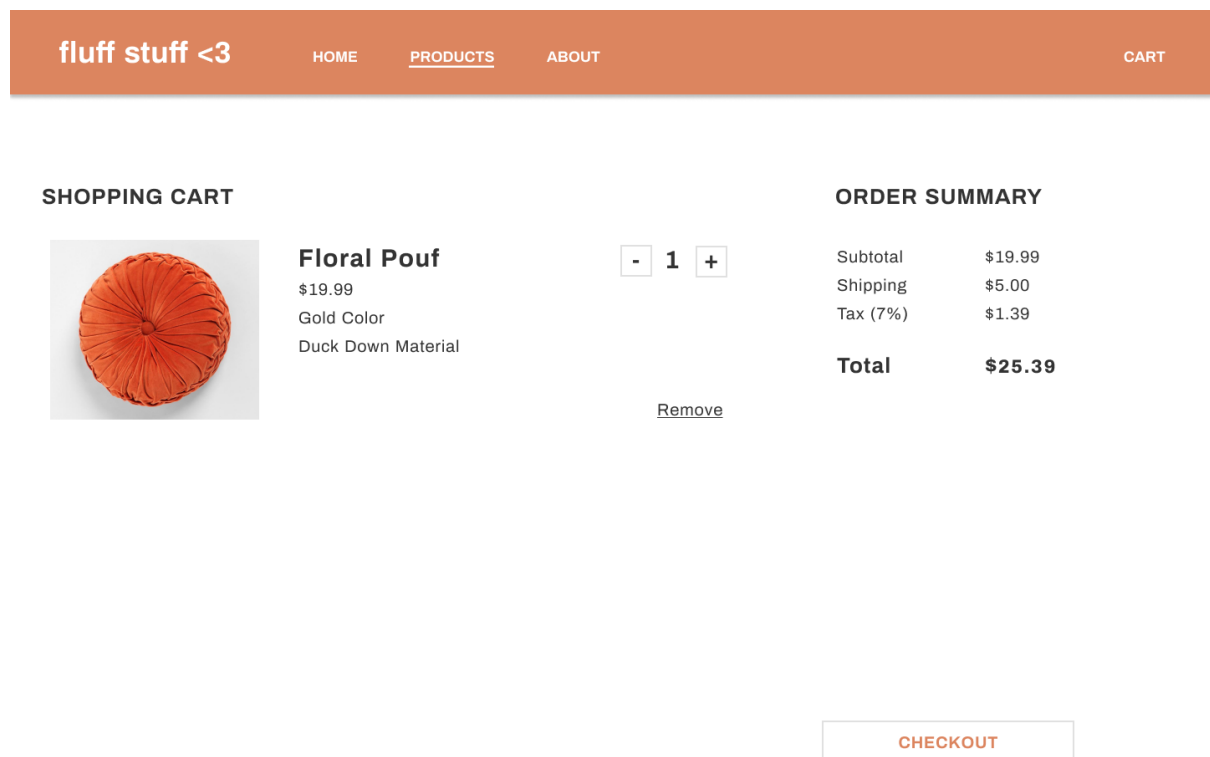

Top: current product detail page

Bottom: shopping cart page

The shopping cart page contains a list of items placed by the users, and the "order summary" which contains the final price for checkout will be calculated at the bottom right. However the position of the section is later changed due to "above-the-fold" principle, as seen in the hi-fi prototype.

High-fi Prototype

This is the high-fidelity version of my sketch, and the only change is probably compiling product name, price, color and material into one column, and quantity will be controlled by an add/subtract pair button. The order summary reflects prices of the items added together. The checkout button is located at the bottom right of the page.
